REHOME OR REUNITE

Instructions

You are a Cat Care Assistant at your local adoption centre. Over the past few days several lost cats have been brought into the centre. Can you reunite them with their owners?

Using a QR reader or camera on your phone, scan the code on each cat to see if they have a microchip. As you reveal details about each cat, it will help you fill out their information sheet and hopefully find their owners.

Not every cat brought into Cats Protection has a microchip. Sometimes the owner has moved and not changed the contact details on the microchip. This makes finding a lost cat's home much harder. If you find any cats that cannot be reunited with their owner, why not complete the lost cat poster too?
